CSE 355 – Term Project Proposal – Movie-Film Database

Students: Mehmet Cumali DEMİR - 150114048, Muhammed KILIÇ - 150115048

Our database project name is UCMD (Unique Categorized Movie Database).We want to implement a database system about movie and film reviews and content. We will advise filtered movies by special cinematographer for people. This advice will contains name, director, year, point, pre-film review, and post-film criticism. All movie and film websites are categorized by contents, classic name, but we think that should change. We will use specialized list of categories for movies away from the typical movie categories. For example; categorize content by joyous, with your partner, on birthdays, loneliness, and love pain. This categorization technique will be efficient for cinematographer. In addition, we make a list that "every day a movie". There will be a list for movie of the day, which will be updated daily and users will vote for each movie. Our database system design will be consist of Persons, Movies, Users, Directors, Actors and User Bookmarks. User will register to system. Each user would have bookmark. In bookmarks would have all of the movies that watched before or want to watch later. Each movie will have categorized in special lists and has name, year, type and directory.
